17. DISTRIBUTION STATEMENT (of the abstract entered in Block 20, if different from Report)		
18. SUPPLEMENTARY NOTES		
19. KEY WORDS (Continue on reverse side if necessary and identify by block number) Mosquitoes, Culicidae, Malaria, Arbovirus, Systematics, Distribution, Vectors		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) The Mosquito Information Management Project was initiated in 1979 for the purpose of developing a computer-based systematic and ecological master file (data bank) of the National Museum Mosquito Collection housed in the Smithsonian Institution. The approximately 500,000 specimens with associated data constitute the best mosquito collection in the world. The data management system SELGEM (<u>SELF-Generating Master</u>) was adapted to meet the needs of the project.		

A new mosquito collection information format has been developed, and programmed for ENTREX (data input hardware-software system) and the Honeywell 6620 computer. ENTREX indices were created for collectors, depositories and countries to permit use of abbreviations in collection records. Five subprograms were written to test the capability of SELGEM in addressing specialized questions to ensure its competence in handling hierarchically arranged data. The computer program, MILREF, which permits conversion of military grid reference coordinates to geographical coordinates (latitude-longitude), was obtained from the Defense Mapping Agency (DMA), making it possible to computer generate distribution maps with either of the above type of coordinates. All available medium and large scale maps (over 2000), and gazeteers were obtained for Middle and South America from the DMA. The following collection records were submitted to the computer master file via ENTREX: (1) 61 collections containing about 3600 specimens from Ecuador and (2) 1100 collections for 15 of the 43 Middle and South American countries concerning the Albimanus Section of Anopheles (Nyssorhynchus) (Faran, 1980).

SUMMARY

The Mosquito Information Management Project was initiated in 1979 for the purpose of developing a computer-based systematic and ecological master file (data bank) of the National Museum Mosquito Collection housed in the Smithsonian Institution. The approximately 500,000 specimens with associated data constitute the best mosquito collection in the world. The data management system SELGEM (SELf-GEnerating Master) was adapted to meet the needs of the project.

A new mosquito collection information format has been developed, and programmed for ENTREX (data input hardware-software system) and the Honeywell 6620 computer. ENTREX indices were created for collectors, depositories and countries to permit use of abbreviations in collection records. Five sub-programs were written to test the capability of SELGEM in addressing specialized questions to ensure its competence in handling hierarchically arranged data. The computer program, MILREF, which permits conversion of military grid reference coordinates to geographical coordinates (latitude-longitude), was obtained from the Defense Mapping Agency (DMA), making it possible to computer-generate distribution maps with either of the above type of coordinates. All available medium and large scale maps (over 2000), and gazeteers were obtained for Middle and South America from the DMA. The following collection records were submitted to the computer master file via ENTREX: (1) 61 collections containing about 3600 specimens from Ecuador and (2) 1100 collections for 15 of the 43 Middle and South American countries concerning the Albimanus Section of Anopheles (Nyssorhynchus) (Faran, 1980).

INTRODUCTION

The Mosquito Information Management Project is a definitive study that will result in the development of a computer-based systematic and ecological master file (data bank) of the United States National Museum Mosquito Collection, the largest and best such collection in the world. The master file will: (1) provide important, easily accessible, coordinated systematic, ecologic, and vector data to the military, public health organizations and other scientific and environmental agencies; (2) enhance and support research conducted by Department of Entomology, AFRIMS Medical Research Laboratory, Thailand, U.S. Army Medical Research Unit Brasilia (USAMRU), and the Medical Entomology Project (MEP); (3) provide knowledge of gaps in the collection and allow new collection strategies; (4) alleviate managerial problems by providing a timely and cost-efficient collection inventory; and (5) serve as a model for data capture involving mosquito biology throughout the world.

The Mosquito Information Management Project works in close association with the Department of Entomology, Walter Reed Army Institute of Research and the Medical Entomology Project, Smithsonian Institution, and is designed to be responsive to each of their needs.

REVIEW OF PROGRESS FOR THE PERIOD

1 September 1979 to 31 May 1980

I. Equipment and Personnel

- A. Museum technician, Charlotte Burnett, was hired and she began work on 1 September 1979.
- B. The following equipment was ordered and received: Hazeltine 1510 CRT terminal; Anadex Printer, and; Techtran 816 datacassette.

II. Development of SELGEM Master File and Querying Capabilities

- A. Collection Form (Appendix 1) - A new collection information form was designed to assist in data entry and expand retrieval capabilities. This new form has combined features of the forms of the project Mosquitoes of Middle America (MOMA) and the Medical Entomology Project (MEP). In addition, this form allows gathering of data on the (1) medical importance of each species, (2) museum data, (3) name of individual who determined species, (4) synonyms, (5) important reference(s), (6) type-data (if collection contains types) and (7) species code (explained in 1980 research proposal). These forms have been adopted by MEP and were field tested January-February 1980, in South Africa by Dr. Y.-M. Huang.

B. SELGEM Master File and Data Entry

- 1. SELGEM Program - A custom auxillary program was designed and written to handle the hierarchically arranged data included in the new collection information form. In a hierarchical file such as this, data is arranged in a pyramid fashion, that is, for any one particular category within a record there may be several, independent subcategories. In order to gain maximal

accessibility to the information stored in this kind of file the computer must be able to search and associate data stored among the many records, and also the data in the different subcategories within a single record.

2. ENTREX Program and Files - The format of the new collection record was programmed into the hardware-software system, ENTREX, which greatly increases efficiency of data entry (Appendix 2 and see methods in 1980 proposal). ENTREX indices were created for collectors, depositories and countries to permit use of abbreviations in the collection records.
3. Collection Records in Master File
 - a) Ecuador File - 61 collection records concerning about 3600 specimens were submitted to the computer via ENTREX as part of an initial test of SELGEM's capability (see 4, below).
 - b) Nyssorhynchus collection - 1100 collection records, with associated species, for 15 of the 43 Middle and South American countries for the Albimanus section of Nyssorhynchus (Faran, 1980) have been submitted to computer.
4. SELGEM Subprograms - Five computer subprograms have been developed to test the ability of SELGEM in addressing specialized questions. The SELGEM system was tested with the Ecuador file, before building other files, to ensure that it was capable of associating data in a hierarchical fashion. To test this the following questions were presented to SELGEM (answers in Appendix 3):

- a) What species have been collected in association with Culex (Mel.) bastagarius in Ecuador?
- b) Where has Anopheles (Nys.) trinkae been collected in Ecuador?
- c) Has An. (Nys.) trinkae ever been collected in ground pools?
Where?
- d) How many larval-pupal-female and larval-pupal-male individual rearings of An. (Nys.) trinkae are from Ecuador?
- e) What months of the year has An. (Nys.) rangeli been collected in Ecuador?
- f) Has An. (Nys.) trinkae been collected above 250 M elevation in Ecuador? Where?
- g) List the locality data, general environment, and immature habitats for all the collections which include An. (Nys.) trinkae from Ecuador.
- h) Has An. (Nys.) trinkae been collected with An. (Nys.) rangeli in Ecuador? In what type of habitat?

5. Computer Conversion of Military Grid Reference Coordinates to Geographic Coordinates (latitude-longitude) -

A computer program, written in FORTRAN IV entitled MILREF, was obtained from the Defense Mapping Agency (DMA). MILREF converts military grid reference coordinates to geographic coordinates. Most of the locality data on the MOMA and MEP forms is recorded in military grid coordinates; however, the computerized plotter at the Smithsonian can only plot distribution maps with geographic coordinates. The acquisition of MILREF now permits the generation of extremely accurate computer-plotted, species distribution maps with locality data in either military grid reference

coordinates or geographic coordinates.

6. Maps - All available medium and large scale maps (over 2000), and gazeteers were obtained for Middle and South America from the DMA. These maps will be used to verify locality data recorded on the collection records.
7. Presentation at Annual Meeting of American Society of Tropical Medicine and Hygiene (ASTMH) - An abstract has been submitted to ASTMH for a paper on the Mosquito Information Management Project to be presented at the 1980 annual meeting scheduled 5-7 November.

VISITORS

Visitors to this project include Dr. Charles L. Bailey (WRAIR, Washington, D.C.), Dr. John N. Belkin (University of California, Los Angeles, CA), Dr. Theodore J. Crovello, (University of Notre Dame, Notre Dame, Indiana), Dr. Richard H. Foote (U.S.D.A., Washington, D.C.), Dr. Kenneth J. Linthicum (WRAIR, Washington, D.C.), Dr. L. P. Lounibos (Florida Medical Entomology Laboratory, Vero Beach, FL), Drs. Adel Merdan and Sherif El Said (Malaria Research Unit, Ain Shams University, (Cairo, Egypt), and Dr. David L. Vincent (U.S.D.A. Importation Project, Beltsville, MD).
